The handicap system is designed to compensate for the bow style and the capability of the member. The initial handicap is based on the system used for the SW Crown to compensate for differences in Bow Style.

To give more people a chance to win the group is split into three divisions, and progress upwards as their average score progresses.

The handicap is calculated from the best five scores recorded for each archer added to their personal handicap, and this total will be used to decide on the division.

Within the division the winning archer will have the highest score calculated by adding their handicap to their current score. This is the adjusted score

Maximum score for Big Game on 36 targets is $24 * 36 = 864$ so anyone with an adjusted average score over 864 will have their handicap reduced to give a total of 864, this reduced handicap will be used in future shoots.

If an archer changes bow style then the handicap will be adjusted using the difference in values for the two style handicaps.
